

Swaradeep Neeli

Senior Software Engineer

Hyderabad, India | +91 96180 61803 | swaradeepneeli@gmail.com | linkedin.com/in/swaradeep | github.com/Swaradeep

PROFESSIONAL SUMMARY

Senior Software Engineer with 5.5 years designing, building, and operating secure, high-performance web applications using React.js, TypeScript, Redux, Node.js, Java, Spring Boot, and Salesforce (Apex). Hands-on across system design, REST APIs, JWT authentication, SSO/OAuth (PKCE), testing, CI/CD (Continuous Integration/Continuous Deployment), and production support on AWS (S3, Lambda, EC2, CloudFront, CloudWatch, ECS, RDS, CodeArtifact, Bedrock AgentCore), Docker, Heroku, GitHub Actions, and Jenkins. Experienced leading small teams, mentoring engineers, resolving critical incidents, and applying Generative AI and prompt engineering to accelerate production-ready delivery in Agile/Scrum environments.

TECHNICAL SKILLS

Core Competencies: System Design, Full-Stack Development, Testing & QA, CI/CD & Deployment, Operational Stability & Monitoring, Mentoring

Languages: JavaScript, TypeScript, Java, SQL, Apex

Frontend: React.js, Redux, React Native, HTML, CSS, SCSS, Tailwind CSS, Material UI, Ant Design

Backend & Data: Node.js, Spring Boot, REST APIs, PostgreSQL, MongoDB, Salesforce

Cloud & DevOps: AWS (S3, Lambda, EC2, CloudFront, CloudWatch, ECS, RDS, CodeArtifact, Bedrock AgentCore), Docker, Heroku, Git, GitHub Actions, Jenkins

Platforms & Tools: Salesforce, Keycloak, Azure AD, Splunk, New Relic, Apex

Security: JWT Authentication, SSO, OAuth 2.0 (PKCE), XSS/CSRF mitigation, malware scanning

Artificial Intelligence: Generative AI, Prompt Engineering, LangChain, Agentic Workflows, Tool Use, Function Calling, Amazon Bedrock AgentCore

Practices: Agile, Scrum, Code Reviews, Unit Testing (Jest, Mocha, React Testing Library), Incident Response, Data Structures & Algorithms

PROFESSIONAL EXPERIENCE

Senior Software Engineer, Appen AI

04/2025 – Present | Hyderabad, India

- Led and mentored a 5-member team as technical lead to **1st place in a 5-day productathon**, delivering production-ready secure code with **0 critical security issues**, **~40% faster setup**, and **up to 80% fewer errors**.
- Architected the winning product with **OAuth 2.0 (PKCE) using Azure AD and Salesforce** as identity providers, surfacing Salesforce data via a **micro-frontend** that reused flagship components for a consistent look and feel.
- Implemented token-based authentication and secure REST APIs using **asymmetric JWT signing** for public clients and **symmetric JWT signing** for server-to-server authentication.
- Built an **in-house user onboarding platform** to replace a third-party service, using Salesforce as the Identity Provider with Connected App API integration; enabled **resume upload/download via Amazon S3 pre-signed URLs**, resume parsing to auto-populate forms, and secure web-session creation with **CSRF/XSS protection**.
- Led organisation-wide **Generative AI and prompt-engineering** sessions; built dynamic **prompt templates and blueprints**, now **adopted by teams across the organisation** to ship production-ready code throughout the software development lifecycle.
- Integrated **user impersonation** into the existing application by identifying the optimal implementation point from deep product and codebase knowledge.
- Implemented **multi-layer caching** to improve performance and scalability, reducing latency and backend load.
- Detected and contained a **DDoS attack** by analysing traffic and stability signals across Heroku, New Relic, AWS CloudFront, WAF, and Kasada; blacklisted offending IPs, enforced request timeouts, and applied **rate-limiting** to protect live users.
- Resolved a major **SSL certificate expiration** impacting critical services by analysing Heroku deployments and New Relic telemetry; improved monitoring with **CloudWatch** to catch expiries earlier.
- Partnered cross-functionally with Product, DevOps, QA, and business stakeholders; upheld quality through rigorous code reviews and disciplined Git/SCM practices.

Software Development Engineer, Appen AI

08/2023 – 03/2025 | Hyderabad, India

- Engineered responsive, component-based **React/TypeScript interfaces with Redux** for predictable state management across connected apps.
- Built and maintained **RESTful backend services in Java with Spring Boot**, focusing on clean API design and operational stability; diagnosed slow queries and performance bottlenecks through query execution plan analysis and eliminated them with **schema normalization and targeted indexing**, cutting critical query times **from 3–4 seconds to under 400 ms (up to 90% faster)**.
- Delivered a **responsive web application in 5 days**, supporting the UI team across features, optimisations, reviews, security hardening, and **GitHub Actions deployments** in an Agile/Scrum workflow.
- Integrated **Salesforce as the Identity Provider** using **headless registration and login endpoints**, with **JWT-based authentication** to maintain session authenticity across associated apps.
- Hardened the web app against XSS and malicious uploads with input controls and **real-time malware scanning** before production release.
- **Mentored peers** through code reviews and pull-request feedback to improve delivery quality and consistency.

Analyst, Deloitte

06/2023 – 08/2023 | Hyderabad, India

- Integrated components into a new channel using automation, achieving an approximately **40% reduction in transaction time**.
- **Owned the UI thread** and delivered the channel enhancement with only two bugs, managing QA sign-offs and smooth deployments.
- Designed an **interactive reporting dashboard** with tables, bar charts, and pie charts for faster operational decisions.

Associate Analyst, Deloitte

01/2021 – 05/2023 | Hyderabad, India

- Developed complex screens and integrated nodes for a new module backed by **PostgreSQL/MongoDB** data flows, **saving up to 30% time per transaction** and enabling real-time tracking of auto-fulfilled orders.
- Collaborated with teams and vendors to deliver six enhancements through **Jenkins CI/CD pipelines** with timely QA sign-offs and production deployments.
- Raised **unit-test coverage above 84%** and integrated UI logging with Splunk, cutting time-to-diagnose for production defects.
- Created **Splunk alerts across 8 environments**, enabling faster issue identification and resolution.

EDUCATION

Master of Computer Applications

SRM Institute of Technology

June 2023 – June 2025 | CGPA: 9.50

Bachelor of Science in Computer Science

Aditya Degree College

June 2017 – March 2020 | CGPA: 8.64

PERSONAL PROJECTS

Identity Card Automation — React Native (Cross-Platform)

2024

- Built a multi-platform app to create and design ID cards with photo capture and secure processing/storage of student data, including offline-friendly flows.

Study Material Provider — React Native (Android)

2022

- Created an Android app with offline study materials and topic-based quizzes for self-paced learning.

Flower Image Classification — Deep Learning (Keras)

2020

- Fine-tuned a pre-trained Keras model to classify 102 floral species at 98% accuracy, monitoring loss metrics to validate model quality.

ACHIEVEMENTS & AWARDS

- Won **1st place at the company Productathon (2025)**, leading a 5-member team to deliver a winning product in five days.
- **Spot Award (x2), Appen** — for rapid learning and delivering performance-related improvements with remarkable impact.
- **Appreciation Award (x2), Appen (2024 & 2025)** — for consistent, high-quality performance and going above and beyond.
- **Spot Award (x2), Deloitte** — for fast ramp-up on new tools, strong ownership, and dependable delivery within tight timelines.
- Secured **4th rank in AKNU CET**, the statewide Computer Science examination (2020).
- Secured a **255th rank in the statewide AP ICET** (2020).
